For attention of the Chairman

Dear Sir,

GUIDELINES FOR TECHNICAL BULLETINS

(Acknowledgement to National Association of Corrosion Engineers [NACE] whose guidelines were used as the basis for this document)

Articles for Technical Bulletins should describe:

1. A new or improved means of solving a corrosion problem.
2. A failure analysis that illustrates the rationale in materials selection or control methods.
3. Previously published information to reemphasize its value in solving a practical problem.
4. Investigations into specific problems relating to corrosion e.g. Apollo–Cahora Bassa HVDC system.
5. New techniques and instrumentation for corrosion control e.g. DCVG surveys.

Articles can be submitted to the Secretary at the above address for submission to the Main Committee for evaluation.

Yours faithfully,

John Lamprecht
